

## Case Study: Ellel Ministries

Ellel Ministries has a training centre, Ellel Pierrepoint, based in beautiful Edwardian buildings in Frensham, Surrey. As this is close to our Surrey office, a member of staff popped in to offer a Free Energy Assessment

and it was taken up enthusiastically.

Sufficient savings were identified to warrant a paid for Full Energy Survey and Carbon Credentials identified some low-cost solutions that the organisation could implement quickly. We also advised on possible grants and loans available to churches and charities.

Much of the property is Grade II listed and our recommendations included solutions likely to receive a sympathetic hearing from the Historic Buildings Officer at Waverley Borough Council.

With a total energy spend in the previous year of £76,329, our proposed projects would produce total annual savings of £23,000.

Larger projects for the future include voltage optimisation, the fitting of a biomass boiler and new technology boiler controls.

***“We were surprised there were so many options, things we could never have thought of, and we are starting a plan. For some of the suggestions we need to make an investment but we’ll recover the money quickly. As the accountant, I think it’s brilliant.*”**

***“We hold retreats, where people come for two to three days. Carbon Credentials was sensitive to our particular needs. We would definitely recommend your happy, friendly, staff.*”**

**Aurora Joubert, Accountant, Ellel Pierrepoint**
