

Case Study: Four Seasons Group

Initially Carbon Credentials carried out a feasibility study on voltage optimization for the Four Seasons Hotel Hampshire.

As a result of that, the hotel was able to get a grant from the Carbon Trust to assist with another feasibility study on heating and power usage.

This led to an Air Conditioning Inspection at the hotel.

Our investigations not only allowed us to improve upon the hotel's energy efficiency, identifying savings of £13,000 on their annual energy bill at the hotel.

The changes and improvements we implemented also resulted in the pleasant side-effect of improved air quality – an important factor in creating the right ambience for a luxury hotel.

“With increasing compliance requirements as well as increasing energy prices the Four Seasons Hotel Group was looking for an energy partner to work with. We were very pleased with the way Carbon Credentials carried out the work.

“Their service was great and they took all the stress and inconvenience out of the task. I'd have no hesitation in recommending them to other hotels. We were stunned by how much money we could save.”

Andy Helmore, Director of Engineering, Four Seasons Hotel, Hampshire
